

# The Internet of Things

## A Connected World

# **Internet of Things Overview**

IBM Watson IoT Overview

IBM Watson IoT Training Resources

Next Steps and Q&A

# Beginnings

The phrase “Internet of Things” originated in 2008/2009.

Kevin Ashton, co-founder of MIT’s Auto-ID center is known for inventing the term "the Internet of Things" to describe a system where the Internet is connected to the physical world via ubiquitous sensors

# Definitions

## Wikipedia:

“The internet of things (IoT) is the network of physical devices, vehicles, buildings and other items—embedded with electronics, software, sensors, actuators, and network connectivity that enable these objects to collect and exchange data.”

## <http://internetofthingsagenda.techtarget.com/definition/Internet-of-Things-IoT>:

“The Internet of Things (IoT) is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with unique identifiers and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction.”

## <http://www.ibm.com/internet-of-things/learn/library/what-is-iot/>

“Internet of Things, or IoT, refers to the growing range of Internet-connected devices that capture or generate an enormous amount of information every day. **For consumers**, these devices include mobile phones, sports wearables, home heating and air conditioning systems, and more. **In an industrial setting**, these devices and sensors can be found in manufacturing equipment, the supply chain, and in-vehicle components”

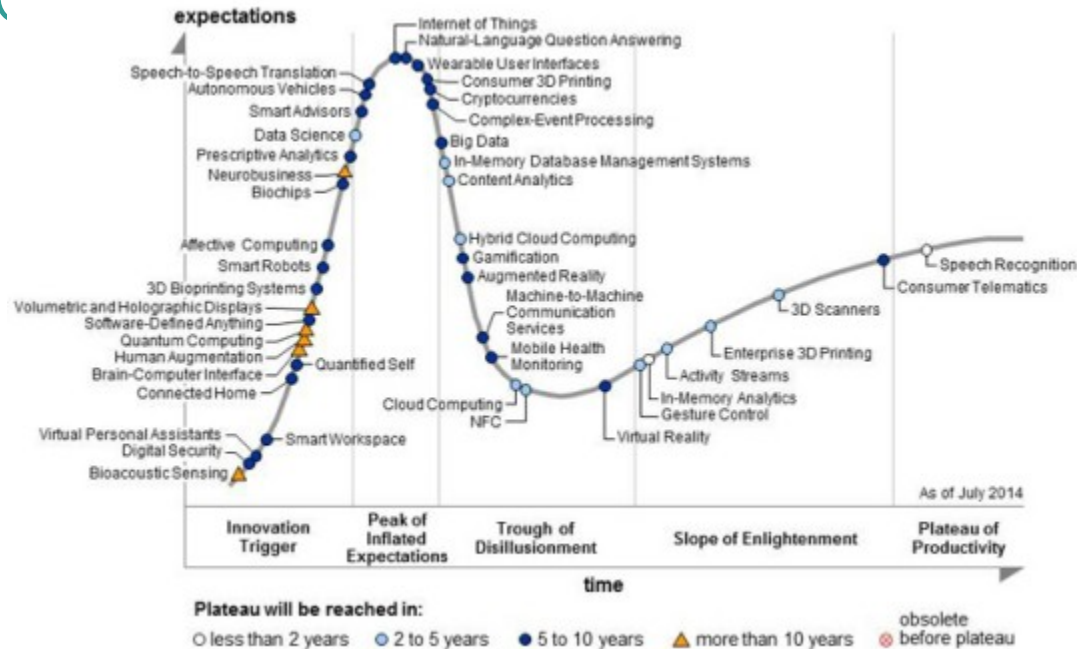

# Attributes of “Thing”

There are seven main attributes that make ‘things’ a part of the IoT:

- ✓ Sensors
- ✓ internet connectivity
- ✓ Processors
- ✓ energy-efficiency
- ✓ cost-effectiveness
- ✓ quality and reliability
- ✓ security.

# Gartner Hype Cycle for Emerging Technologies

# IoT today and the future

**9 billion** devices around the world are currently connected to the Internet, including computers and smartphones

The number is expected to increase dramatically within the next decade, with estimates ranging from **50 Billion devices** to reaching **1 trillion**

The Internet of Things has the potential to create economic impact

*of \$2.7 trillion to \$6.2 trillion annually by 2025*

# Why Connect Things?

My  tells my  that the  is over

My  tells my  to open the garage and start my 

My  tells my  that an intruder is entered

A  tells my  to tell my  that a  arrived

# The Opportunity

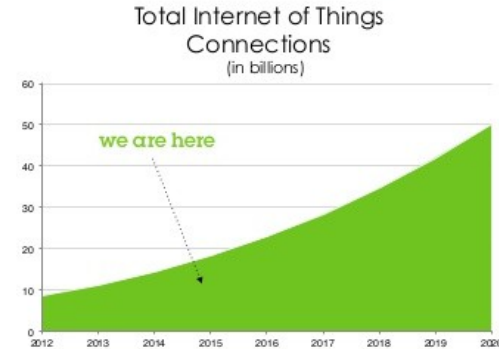

The number of connected things exceeded the number of people on earth in 2008.

Only about 1% of the things are currently connected to the internet.

With IPV6, there are more web addresses than atoms on the earth's surface.

## Why Is It Important?

The amount of Internet of Things (IoT) connections is about to explode.

# Many Industries Will Benefit

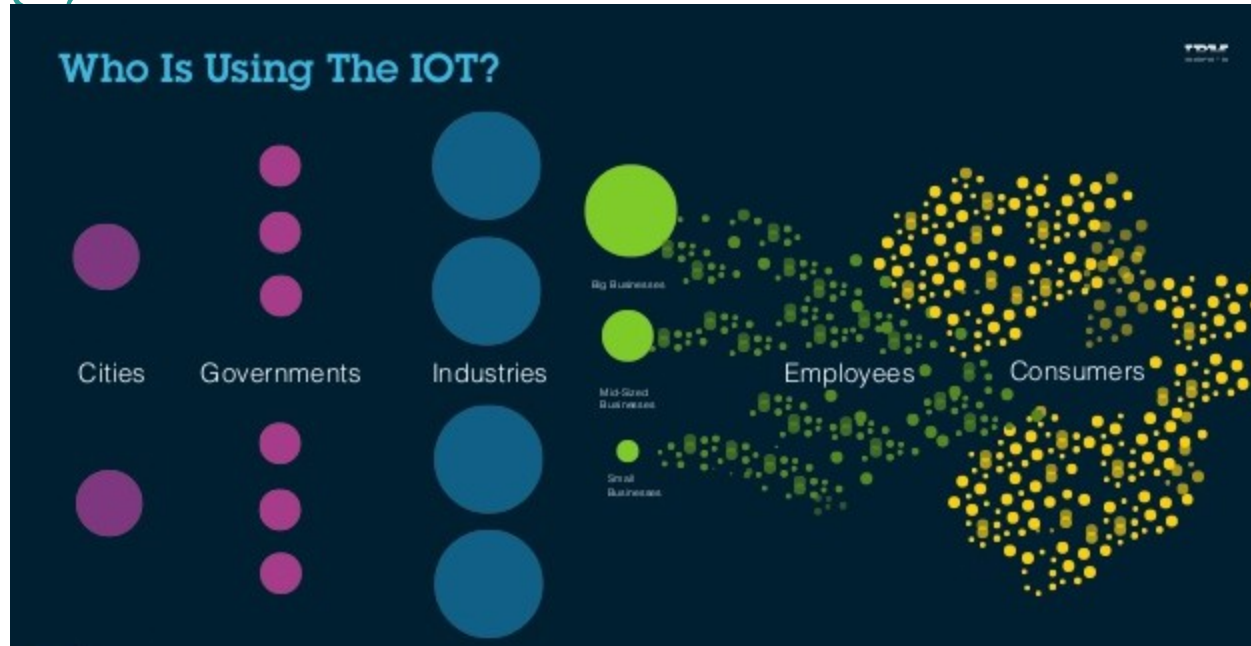

## Top Ten in GSMA "Connected Life" 2020 Forecast (\$4.5T):

- |     |                                   |                      |
|-----|-----------------------------------|----------------------|
| 1.  | Connected Car                     | <b>\$600 billion</b> |
| 2.  | Clinical Remote Monitoring        | <b>\$350 billion</b> |
| 3.  | Assisted Living                   | <b>\$270 billion</b> |
| 4.  | Home and Building Security        | <b>\$250 billion</b> |
| 5.  | Pay-As-You-Drive Car Insurance    | <b>\$245 billion</b> |
| 6.  | New Business Models for Car Usage | <b>\$225 billion</b> |
| 7.  | Smart Meters                      | <b>\$105 billion</b> |
| 8.  | Traffic Management                | <b>\$100 billion</b> |
| 9.  | Electric Vehicle Charging         | <b>\$75 billion</b>  |
| 10. | Building Automation               | <b>\$40 billion</b>  |

# Who is using the Internet of Things?

# Enterprise IoT Innovators Face Five Key Challenges

## 1 Entirely New Security Threats

---

- Devices are no longer contained and protected within traditional data centers.
- Automobiles, power plants and medical devices are under growing attacks from hackers.

## 2 Fundamental Shifts in Business Models

---

- One-time purchases will be transformed into long term service revenue streams.
- Traditional manufacturing and place-based businesses must become IT-centric organizations.

## 3 Unprecedented Data Volumes

---

- Real world sensors will generate entirely new kinds of data as well as volumes 1000's of times higher than pre-IoT systems.
- Traditional reporting and analytics will be eclipsed by big data and machine learning.

## 4 New Privacy Landscape

---

- Millions of sensors are collecting physical world data on people and objects.
- Consumers and legislators are slowly grasping the implications and stiffer regulations are likely.

## 5 Incompatible Standards

---

- A proliferation in competing platforms and incompatible standards raises costs, time-to-market and risks for IoT innovators.

# developerWorks Recipes

Ecosystem & partnership strategy extend the IBM IoT platform

<https://developer.ibm.com/recipes/>

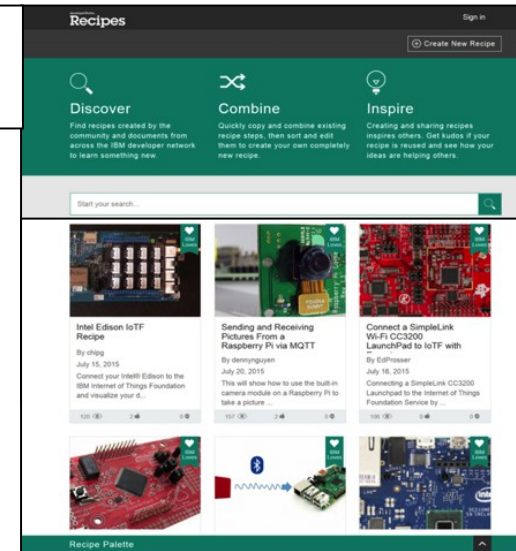

**Derive IoT value on the Cloud through strong industry partnerships and open ecosystem**

Examples:

## Wide variety of supported devices

- ✓ Self Service
- ✓ Open ecosystem
- ✓ Simple tutorials
- ✓ Connect in moments

# Watson IoT Platform Analytics

## Real-Time Insights

- ✓ With IBM® Watson™ IoT Platform Analytics Real-Time Insights on Bluemix (IoT Real-Time Insights), you can perform analytics on real-time data from your Internet of Things devices, and gain insights about their health and the overall state of your operations.
- ✓ Based on Spark platform
- ✓ Highly scalable
- ✓ Parallel execution of tasks

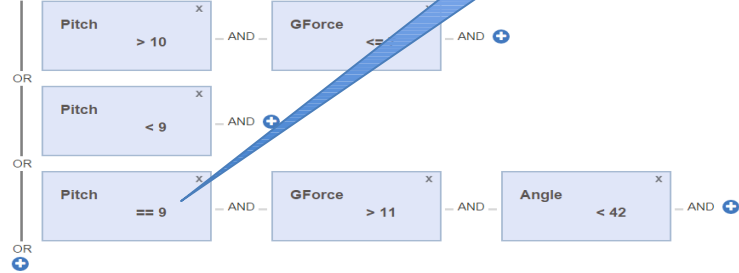

### Complex Rule

Example of a complex rule

Message schema: PhoneS

Alert priority

IF: Set one or more conditions

Define complex rules

Define Virtual Data point

Data point type: ☐ Data point ☒ Virtual data

Data point:

Description:

Define the virtual data point function: ☐ Add before ☒ Add component

Virtual data point = ( d.ax + d.ay ) / 2.1

Data type:

Define actions

Edit Action

Type:

\*Name:

Description:

Webhook information

\*URL:

Method:

User name:

- ✓ Send Email
- ✓ Webhook action
- ✓ Node-RED
- ✓ IFTTT

# Combining weather, analytics and IoT to deliver better outcomes

Analyzing weather data and energy consumption can **keep the lights on**. Energy and utility companies say weather causes

**70%** of power outages.\*

[ibm.com/ibmandweather](http://ibm.com/ibmandweather)

\*Source: Global Climate Risk Report 2014, Aon Risk Solutions 2014

**IBM** The Weather Company

By combining weather forecasts with analytics, your insurance company could **text you a warning** before hail hits your area. Insurance companies pay

**\$1 billion** in claims every year for vehicles damaged by hail.\*

[ibm.com/ibmandweather](http://ibm.com/ibmandweather)

\*Insurance Information Institute, April 2014

**IBM** The Weather Company

Weather affects more than what we wear or what we do. Businesses lose

**\$500 billion** every year in the U.S. because of weather.\*

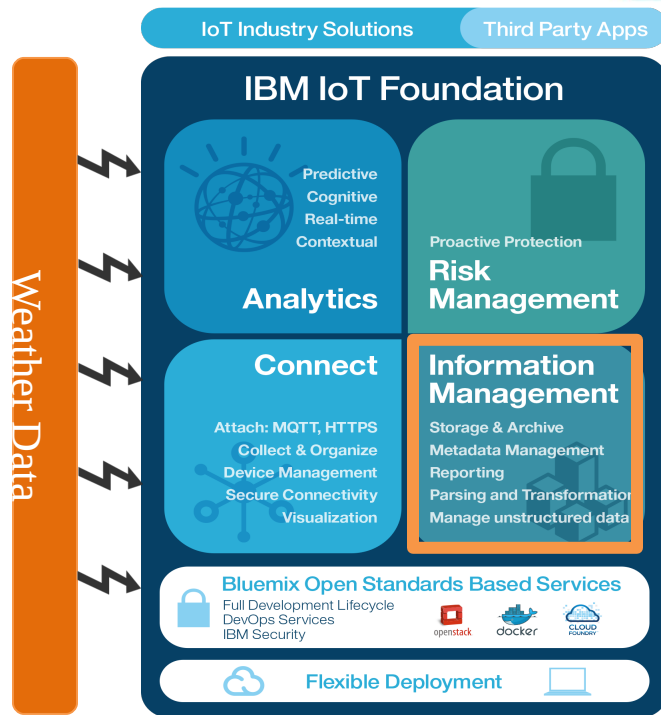

[ibm.com/ibmandweather](http://ibm.com/ibmandweather)

\*Insurance Information Institute, April 2014

**IBM** The Weather Company

## Weather assets fuel IoT transformation across industries

- ✧ Incorporate weather data into your IoT applications
- ✧ Combine weather data in your data set to gain more insight
- ✧ “Insights for Weather” API now available on Bluemix

# Cognitive Systems

## Humans excel at:

- Common Sense
- Morals
- Imagination
- Compassion
- Abstraction
- Dilemmas
- Dreaming
- Generalization

## Cognitive Systems excel at:

- Natural Language
- Machine Learning
- Eliminate Bias
- Endless Capacity
- Locating Knowledge
- Pattern Identification

# Cognitive systems - APIs provide developers easy access to cognitive building blocks

A collection of REST APIs and SDKs that use cognitive computing to solve complex problems.

- Learning from the connected world to transform industries

### IBM IoT Foundation platform: Cognitive Analytics

IBM will make four families of Watson API services available as part of a new IBM Internet of Things Foundation platform analytics offering. As the physical world of devices and systems are becoming highly digitized, these capabilities will allow clients, partners and developers to make greater sense of this data through machine learning and correlation with unstructured textual, video and image data.
